

## 3" Spin Klin™ Apollo

Automatic disc filtration system  
with large filtration area

inlet/outlet

**150 - 200 mm**  
**(6" - 8")**

flow rates

**80 - 320 m<sup>3</sup>/h**  
**(396 - 1,409 gpm)**

filtration degrees

**55 - 400**  
**micron**

max. working pressure

**10 bar**  
**(145 psi)**

### features:

- Micron-precise depth filtration of solids
- Innovative disc technology captures and retains large amounts of solids
- Long-term operation with minimal maintenance
- Easy and simple operation
- Short automatic backwash with regulated water volume for a small water footprint
- Permanently eliminates the need to replace filter media
- Compact design

## How the 3” Spin Klin™ Apollo Systems Work

### General

The Apollo 3” Spin Klin™ series are modular, all polymeric, automatic disc filters with a patented self-cleaning backwash mechanism. The 3” Apollo systems range in flow rates from 80 m<sup>3</sup>/h (352 gpm) to 320 m<sup>3</sup>/h (1,409 gpm) with filtration degrees ranging from 55 – 400 micron. Inlet /Outlet from 150 - 200 mm (6” – 8”) diameter.

### The Filtration Process

The discs are stacked on the Spin Klin™ spine and assembled according to pre-determined water filtration requirements. During filtration, the discs are compressed by means of a pre-loaded spring and differential pressure, forcing the water to pass through the grooved disc surface, thus trapping the solids.

### The Backwash Process

Activated by a pre-determined time command or differential pressure, the system enters backwash mode. The inlet valve port shuts as the drain valve port opens. During the backwash process, pressure is released and the spine’s piston elevates, releasing the compression on the discs. Tangential jets of filtered water are then forced through the nozzles positioned along the spine. At this stage the discs spin freely, loosening the trapped solids which are then flushed out. During the flushing cycle each filter pod is backwashed sequentially, while the other pods continue to supply filtered water downstream. When a pod begins the backwash cycle, the system valves automatically reverse the flow in the pod, allowing filtered downstream pressurized water to enter the backwashed filter.

### The Apollo Spine Technology Offers:

- Significantly larger filtration area (in length and diameter, triple the 2” disc)
- Reduction in required number of valves and accessories
- Optional use of low pressure backwash spines, as low as 1.5 bar
- Sea water polymeric materials available
- Lower backwash flow during cleaning process
- Unique design offers the largest disc element technology on the market

Construction materials	
Filter Housing & Lid	PP (Polypropylene)
Disc elements	PP (Polypropylene) or PA (Polyamide)
Backwash valves	RPA (Reinforce Polyamide) or RPP (Reinforce Polypropylene)
Manifolds	PP (Polypropylene)
Seals	NBR or EPDM, (Viton optional)
Control Tubing	PE or PA
